DESCRIPTION

The **PSDC161214** stabilized power supply is designed to supply analog cameras or other devices requiring stabilized voltage of **12V DC**. The output voltage adjustment range is adjusted via a potentiometer within the range of **12V±15V DC**. The PSU features 16 outputs protected independently by either glass fuses or polyswitches. A failure (a short circuit) in the output circuit makes a fuse blow or an activation of the polymer fuse and disconnection of the circuit from the DC power supply (+U). The PSU is housed in a metallic enclosure with an indication panel featuring a microswitch indicating unwanted opening of the door (faceplate).
